

Encube Ethicals Accelerates Enterprise AI Adoption with NSOffice.AI, powered by Claude

## Impact At A Glance

### 50%

Faster report & presentation creation

### 50-60%

Reduction in research & follow-up time

### 2X Fast

Faster & accurate decision cycles

## Challenge

Encube Ethicals organizational **knowledge remained dispersed across documents, presentations, spreadsheets, and siloed enterprise systems.**

Decades of pharmaceutical formulation expertise largely resided within individuals and disconnected repositories, making it difficult for teams to access, reuse, and drive innovation.

The organization also faced the **challenge of driving AI adoption across business functions.** Multiple teams were exploring AI initiatives independently, resulting in **fragmented pilots, inconsistent governance, and limited visibility into business impact.**

They wanted to leverage a scalable AI platform that can drive responsible AI adoption while ensuring **data privacy, regulatory compliance and without compromising confidentiality guardrails.**

## Solution

**Encube Ethicals needed more than a productivity tool.** They needed AI that understood their systems, their data, their compliance requirements and could put that intelligence in the hands of every employee, not just the technical few. They **deployed NSOffice.AI, powered by Claude**, as an enterprise-wide intelligence layer. One platform that connects to the knowledge that already exists inside the organisation and makes it accessible, and actionable.

## Key Highlights

- **No more tab hopping:** Employees get secure access to web resources and internal systems without switching tools or hunting down the right person.
- **Built for pharma-grade compliance:** Enterprise security, access controls, and governance baked in from day 1. So your AI interaction stays transparent and traceable.
- **From blank page to boardroom-ready:** Presentations, reports, summaries, and meeting notes generated in minutes, grounded in actual business context.
- **Pay for what you use:** Unlike traditional enterprise softwares that charge flat licensing fees regardless of usage, NSOffice.AI runs on token-based pricing for actual AI interactions.

## Conclusion

Most enterprises bolt AI onto existing workflows and wonder why nothing changes. Encube Ethicals built differently by deploying NSOffice.AI, powered by Claude, as an intelligence layer across the organisation. The result they saw was less manual effort, faster execution, and organisational knowledge that actually gets used.
