

Encube Ethicals Turned Scattered AI Pilots Into One Governed Brain

Impact At A Glance

**50%**

Faster report and presentation creation

**50–60%**

Reduction in research and follow-up time

**2x**

Faster, better evidenced based decision cycles

Where Encube Started

A **speciality pharmaceutical manufacturer**, built on decades of formulation expertise, serving tightly regulated markets.

At a company like Encube, **the real asset isn't the plant, it's the formulation, regulatory and process of knowledge** built over years and most of it sat scattered across documents, spreadsheets and isolated systems. Individual employees held that knowledge but the organization didn't.

Teams were already running AI pilots, each one on their own, with no coordination between them, that left fragmented experiments, inconsistent governance and no way to see the actual business impact. **In regulated pharma, that kind of blind spot isn't an option.**

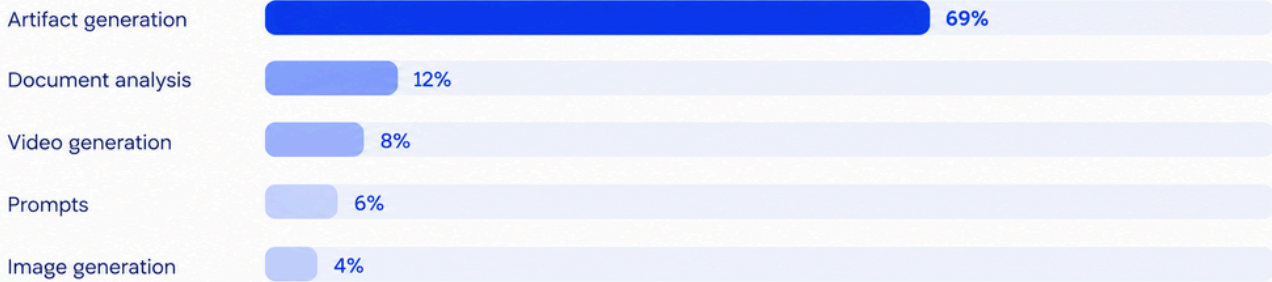

Encube didn't need another productivity tool. It needed **one intelligence layer** that understood its systems, its data, and its compliance obligations, and put that understanding in every employee's hands, not just a technical few.

The Journey

Live since May 2026. Five months of depth already proven and scale comes next.

This is a production engine, not a chat pilot

Share of Nectar Units consumed, by what the platform was asked to do

Seven in ten Nectar Units went towards finished work, documents, decks and models, not conversations.

Capacity is the constraint, not appetite

Nectar Units consumed against allocation, five months in

93% consumed

7% left

~220 NU

per user, five months

~108

AI actions per user

~4,000 NU

consumed per month

This gives Encube a known cost per unit, with room to grow as it brings more teams onto the platform.

Depth Proven

NOW · 5 MONTHS IN

A core group runs the Brain as a daily production tool, under one governance model.

Scale

NEXT 12 MONTHS

Bringing R&D, regulatory, quality, commercial divisions on the same governed layer.

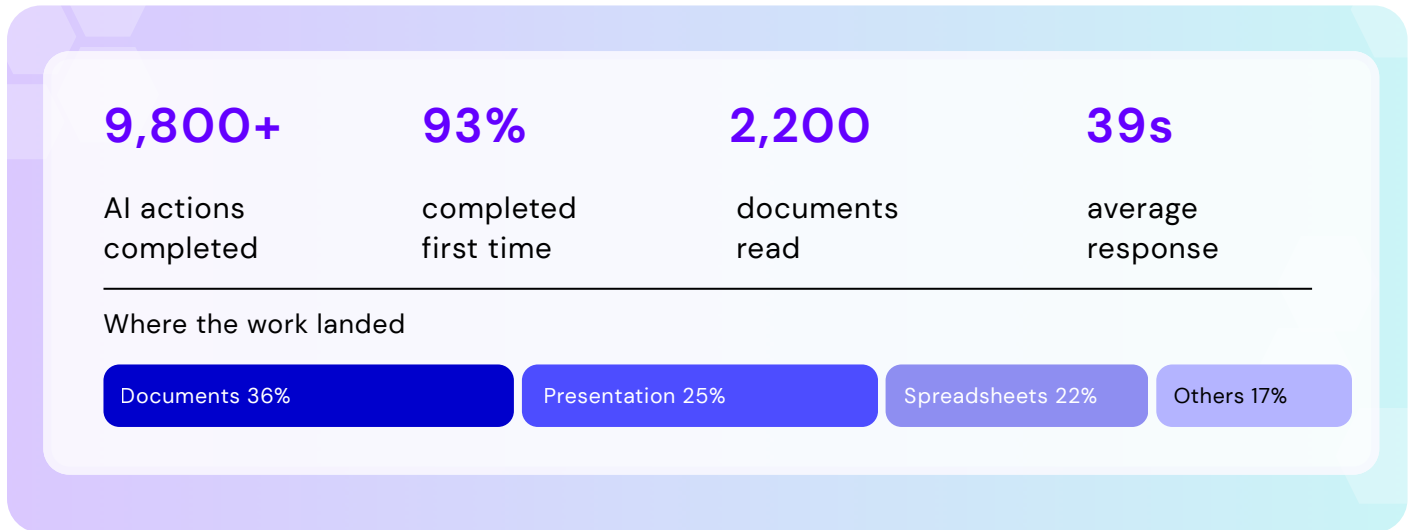

Execution

YEARS 2 - 3

Moving from answers to action: workflow Bees run regulated processes end to end.

What Five Months Produced

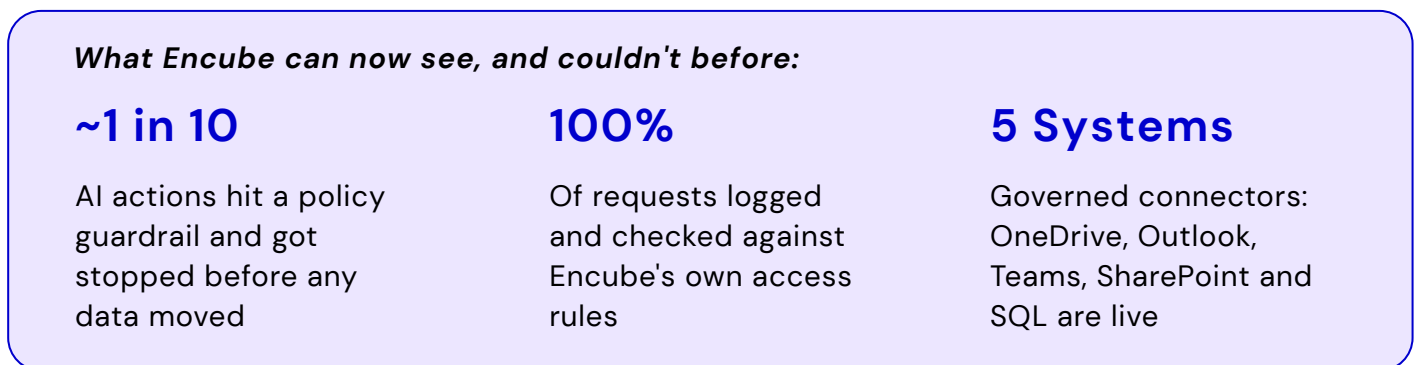

Work that would otherwise have been built by hand, now done through NSOffice.AI.

Reports, decks and models that once took days now return grounded in Encube's own context, **50% faster production**, with research and follow-up **time cut to two thirds**.

Governance, Not Guesswork

The difference between one governed layer and a dozen unmanaged pilots

Five months in, Encube has **replaced fragmented pilots** with one measurable, auditable layer and **steady growing usage within its current capacity**.
